Sir:

Please cancel pending Claims 1-40.

Please add the following new Claims:

- a. A method of treating hemophilia in a mammal, comprising:
- providing recombinant adeno-associated virus virions comprising a nucleotide sequence encoding Factor VIII operably linked to expression control elements; and
 - administering said recombinant adeno-associated virus virions to a mammal under conditions that result in the expression of Factor VIII protein at a level that provides a therapeutic effect in said mammal.
